Health Management on the Quality of Life of Patients with Chronic Diseases

Message from the Guest Editor

Chronic diseases, including diabetes, cardiovascular conditions, cancer, and respiratory illnesses, represent a leading global health challenge and continue to impose a significant burden on individuals, families, and healthcare systems worldwide. Effective health management strategies are crucial not only for improving clinical outcomes but also for enhancing the quality of life (QoL) of those living with long-term conditions. We seek contributions that examine health literacy, self-management behaviors, digital health interventions, community-based care interventions, and interprofessional collaboration models of care in improving health outcomes. We particularly welcome manuscripts that highlight culturally responsive care, equity in care access, policy implications, and innovations in nursing and allied health practices.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
