

Special Issue

Post-COVID-19 Wellbeing

Message from the Guest Editor

Post-COVID-19 Condition (PCC), also known as Long COVID, is a serious sequela of COVID-19 infection. Although for some people PCC is reasonably mild, for others it is a disabling, life-changing illness. It is crucial that supportive care for people with PCC is evidence-based. We are therefore collating this Special Issue on the well-being of people with PCC. Our interpretation includes various aspects of well-being, encompassing a variety of outcomes; we are interested in, but not limited to, studies on quality of life, mental health and psychological outcomes, social outcomes (e.g., employment, housing etc.) and resilience. We invite contributions from around the globe, including low- and middle-income countries, from a variety of health systems and settings. Both quantitative and qualitative studies are welcomed. We request that all submissions consider equity, given that we know that the impact of PCC is unequally borne, and adversely affects structurally marginalised communities.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
