

Special Issue

Advancing Climate Health Literacy for Public Health Promotion and Resilience

Message from the Guest Editors

As climate change intensifies environmental and health-related threats, ranging from extreme heat and air pollution to food insecurity and natural disasters, there is an urgent need to strengthen health promotion strategies that are responsive to climate realities. A key component of these strategies is climate health literacy: the ability of individuals, communities, and professionals to access, understand, evaluate, and act on information about climate-related health risks and interventions. This Special Issue of the *IJERPH* focuses on how enhancing climate health literacy can drive effective health promotion and disease prevention across populations. We welcome research and commentary that explores innovative methods to communicate climate-related health risks, promote protective behaviors, build adaptive capacity, and engage diverse populations in sustainable and health-promoting practices. Through this Special Issue, we aim to illuminate pathways for integrating climate awareness into health promotion practices that empower individuals and communities to protect their health in a changing climate.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
