

Special Issue

The Role of Digital Pro-social and Anti-social Experiences on the People Well-Being and Health

Message from the Guest Editors

Assuming that digital media is not simply a communication tool, representing “real” relational and symbolic contexts in which individuals and groups have their social experiences, this Special Issue invites the submission of high-quality empirical papers, reviews, and meta-analyses to advance the understanding of the relationships between digital pro-social and anti-social contents and behaviors and individuals’ and community well-being and health, focusing on the contribution that social psychology can make in this sense.

We particularly welcome high-quality studies investigating the various digital environments (e.g., social networks, videogames, web-based applications in general, virtual or augmented reality, etc.), the various forms of pro-social and/or anti-social contents (e.g., digital discrimination, hate speech, etc.) and behaviors (e.g., anti-racist and condemning behaviors, pro-environmental attitudes, collective actions, cyberbullying, etc.), and their relationship with individuals’ and communities’ well-being and health.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia
