The 2nd Edition: Livable, Healthy and Lively Cities and Tourism Destinations: Facing Pandemics and Other Crisis Situations

Message from the Guest Editors

Public health is a basic assumption for increasing the prosperity of the economic system. Today, 80% of the world population is living in big cities, and this figure is expected to grow in the near future. Nevertheless, the current COVID-19 pandemic has attacked society's main bases of city "mobility" and "social proximity and interactions". These two factors are also essential for tourism development, a major source of wealth for many countries worldwide. Consequently, both the daily life and tourism of cities have been seriously affected by the COVID-19 pandemic. Thus, it is urgent to research and identify critical factors, strategies, and actions and to seek possible pathways for a safe reactivation of daily life and tourism in cities. New research papers, reviews, business cases, and conference papers are welcome. Theoretical papers dealing with new approaches and disruptive forms of managing crisis situations in cities are also of interest. Other accepted manuscript types include methodological papers, position papers, brief reports, and critical commentaries.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
