

Special Issue

The Effect of Positive Psychology on Health

Message from the Guest Editor

We invite you to submit research on the intersection of positive psychology and public health. This Special Issue will explore the role of positive psychology in improving health outcomes, disease prevention, and overall life satisfaction. We welcome research contributions exploring how positive psychology constructs (e.g., PERMA, optimism, character strengths, and gratitude) and self-determination impact mental and physical health outcomes, disease and disability management, and healthcare access and engagement. We are also interested in seeing manuscripts exploring artificial intelligence utilization in positive psychology research to improve health and well-being outcomes. We seek a range of methodological approaches, including cross-sectional studies, qualitative research, mixed methods, longitudinal studies, and experimental and quasi-experimental studies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
