

Special Issue

Advancing Breast Health and Breast Cancer Prevention Through Policy, Community, System and Technological Change

Message from the Guest Editors

Papers in this Special Issue will highlight challenges and opportunities to improve breast health across the life span and mitigate the population-level impact of breast cancer through prevention and early detection. Topics that could be addressed in this Special Issue include but are not limited to the following:

- National screening programs and policies, such as government-led screening initiatives and accessibility of population-wide screening strategies;
- Frameworks for developing recommendations for screening and prevention behaviors;
- Healthcare system infrastructure and implications for timely screening and diagnosis;
- Community-based interventions that focus on improving breast health through system-level changes;
- Policies and models that improve the uptake of genetic counseling and testing for recommended populations;
- System-level efforts to address breast health throughout the life course (for example, pregnancy, postpartum, and menopausal periods);
- ...

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
