Community-Informed Health Promotion Interventions with Indigenous Communities

Message from the Guest Editors

Community-informed health promotion interventions with Indigenous communities prioritize cultural relevance, trust-building, and community engagement to address persistent health disparities. Key obstacles to relevant intervention design and continuous programming include limited (or absence of) local or cultural guidance, failure to address persistent systemic inequities or develop plans for sustainability, and inadequate access to resources, e.g., time for collaborative program development and engagement of traditional knowledge holders. The literature offers cases of adapted programs developed for non-Indigenous communities, yet community campus teams have few examples of effective, sustained interventions that are co-designed with community collaborators and integrate traditional knowledge, values, and practices into the program, from design to implementation and through dissemination. This Special Issue is designed to showcase approaches and methods used by community campus teams to form a consensus on the application of traditional knowledge in order to align with local cultural contexts and to share outcomes and strategies for sustainability.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
