Negative Health Impacts of Environmental Contaminant Exposure During Early Childhood

Message from the Guest Editor

Early childhood represents a critical period of vulnerability to environmental exposures, with potential long-term implications for health and development. While our understanding of individual contaminants has advanced, the complex interactions of multiple exposures during this crucial developmental stage remain an area requiring further investigation. The goal of this Special Issue is to advance the scientific understanding of how environmental contaminants affect children's health during this critical developmental period to inform strategies to protect this vulnerable population, and promote healthier outcomes across the lifespan.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
