Cross-Cultural Perspectives on Mental Health Personal Recovery

Message from the Guest Editors

Mental health personal recovery is commonly defined as the unique, personal process by which people with mental health problems regain control over their lives, and build a meaningful and satisfying life despite their condition. This is different from clinical recovery, where someone recovers from the mental health problems, experiencing none or fewer of those. Care is needed for personal recovery and clinical recovery for people with mental health problems to live a meaningful and satisfying life. However, historically and in many countries, clinical recovery has been emphasised more than personal recovery. Personal recovery has been receiving global attention. However, how personal recovery is understood differently and practiced differently across cultures remains under-explored. This Special Issue focuses on cross-cultural views on personal recovery. We welcome studies from any part of the world, but especially those from non-WEIRD (Western, educated, industrialised, rich and democratic) countries are welcome to report what has been under-reported.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
