

Special Issue

Occupational Health Nursing in Diverse Settings

Message from the Guest Editor

We are calling on articles highlighting research and innovative practices in occupational health, shedding light on critical issues that impact employee well-being. Occupational health nursing publications normally cover a wide spectrum of workplaces, such as industries, mining, healthcare, construction. Work settings research, however, should look into a more holistic approach to worker health and safety across various sectors, and not just ordinary ones. This is to capture health and safety issues in the evolving work settings which encompasses the emerging world of work, such as remote and hybrid workplaces. The articles featured in this issue explore the following:

- Occupational health in the transport industry
- Health and safety in mobile workplaces
- Occupational health policy
- Digital health and technology in occupational health
- Women's health and safety in diverse work settings

The contributions come from a diverse range of disciplines, reflecting the multifaceted nature of occupational health. We encourage submission of case studies, reviews or original research papers that will inspire new research directions, and inform evidence-based practices in occupational health nursing.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
