

Special Issue

A Comprehensive Update on Treatment of Dementia

Message from the Guest Editor

Dementia is one of the biggest public health challenges in the world. A recent study suggests that the number of people with dementia will exceed 150 million cases by the year 2050. Although Alzheimer disease is the most common form of dementia, other conditions, such as Parkinson disease, Lewy body disease, chronic traumatic encephalopathy, vascular ischemia, frontotemporal disorders, and alcohol syndromes, may cause dementia. In view of this, studies are necessary to provide a comprehensive update on the treatment of dementia. We propose this Special Issue in an effort to better understand the impact of dementia on subjects' life, and to improve treatments and health policies. Manuscripts involving all fields of knowledge are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
