

Special Issue

Analysis Method and Toxicological Effect Evaluation of Pollutants Based on Fluorescence Imaging

Message from the Guest Editors

Fluorescent imaging analysis has played very important roles in monitoring environmental pollutants, such as heavy metal ions, organic compounds, gas molecules, and so on, and evaluating their toxicological effects in recent decades. This Special Issue aims to collect original research and review articles on recent advances in fluorescent imaging for environmental pollutants, especially for the evaluation of toxicological effects in living systems.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
