

## Special Issue

# Second Edition of Individualized Bio- Psychosocial Interventions— New Horizons in Psychiatric Practice and Public Mental Health

### Message from the Guest Editors

Coordinated and interdisciplinary efforts in psychiatry and public mental health are highly important to improve knowledge on personalized treatment for people across their life. Integrated healthcare and research concerning best practice models are needed, as well as consequent educational efforts for psychiatric and psychotherapeutic trainees and their mentors.

Healthcare effectiveness of psychotherapy depends on the training and qualitative development of psychotherapists. This Special Issue invites papers that identify putative specific models of healthcare, their integrative establishment, mechanisms of change in different psychotherapy modalities and treatment settings, psychotherapy process and treatment measures, and papers reviewing the state-of-the-art practices in the field. New horizons in educational efforts and training are very welcome, and assessment of psycho-social skills appreciated. Further, papers focusing on the cost-effectiveness of psychological and social interventions as well as papers integrating a neuroscientific approach and a bio-psychosomatic view are invited.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
