

Special Issue

Current Issues in the Neurological Rehabilitation of Children and Adolescents

Message from the Guest Editors

Patients with illnesses and injuries of the nervous system, especially children and adolescents, may benefit from neurological rehabilitation (NR). As with other forms of treatment, the basic goal of NR is to improve patients' functioning, decrease the severity of their impairing symptoms, and improve their quality of life.

This Special Issue aims to discuss recent advances and changes in the field of neurological rehabilitation and their influence on the diagnosis and treatment of major neurological illnesses and disabilities, with particular emphasis on children and adolescents. We are interested in original research and review articles that may be helpful in further advancing current knowledge and practice in the field of NR.

Once again, I would like to invite you to actively participate in the special issue we are preparing on 'Current Issues in the Neurological Rehabilitation of Children and Adolescents'. More information can be found in the online version of our invitation (link https://www.mdpi.com/journal/ijerph/special_issues/6ZCD2ADWTH)

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
