Prevention of High-Risk Behaviors in Adolescence

Message from the Guest Editor

Adolescence is a time of critical development for emerging youth, characterized by sensation seeking, psychological growth, and potential engagement in high-risk behaviors. These high-risk behaviors may lead to future health problems in a person's lifespan, if not prevented. This Special Issue will highlight risk behaviors across adolescence, their risk factors, and prevention programming designed to mitigate high-risk behavior among adolescents. Research for this issue is characterized by high-level analytical methods (e.g., structural equation modeling, meta-analysis, and secondary data) and offers potential ideas for prevention science for adolescent health.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
