

Special Issue

Modern Epidemiology of Occupational Lung Diseases

Message from the Guest Editor

This Special Issue seeks to highlight innovative epidemiological methods, novel exposure assessments, surveillance strategies, and translational research that informs prevention and policy. We particularly welcome contributions addressing lung health in occupational settings focusing on interactions between occupational exposures and infections such as tuberculosis, and the compounded risks faced by vulnerable worker populations. Papers exploring local, regional, and global trends; technological advances in detection; and the impacts of climate change, mechanization, and informal labor are encouraged. By bringing together diverse interdisciplinary perspectives, this Special Issue aims to advance scientific understanding and support evidence-based interventions to protect worker respiratory health worldwide.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
