Impact of Parent–Child Relationships on Psychological Well-Being among Sexual and Gender Minority Families

Message from the Guest Editor

High-quality parent–child relationships are associated with an array of positive health and well-being outcomes for parents, children, and families, across the lifespan. While research examining the parent–child relationships among SGM people is growing, the aim of this Special Issue is to address some existing gaps in this area. Sexual and gender minority people for this call are broadly defined as those who identify their sexual and gender identities (i.e., lesbian, gay, bisexual, transgender, nonbinary, genderqueer, etc.), along with sexual attraction, behaviour, and/or gender expression, which are considered to be outside of cultural and societal norms. SGM parents have unique strengths, yet are facing a number of challenges and inequities. Manuscripts should focus on the outcome(s) or role(s) of parent–child relationships, across the lifespan (i.e., infants/children/adolescents/adults), of SGM parents (broadly defined). Manuscripts should represent the diverse experiences of SGM parents and their relationships with their children.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
