

Special Issue

Sustainable Food Systems: From Processing to Marketing and Policy-Making

Message from the Guest Editor

A sustainable food system is critical to enable a sustainable, diverse and wholesome lifestyle for global consumers and security in the supply of the food and nutritional needs of the expanding population in such a way that reduces the environmental impact of food production and consumption. Thus, in this Special Issue, we welcome manuscripts across a broad range of topics, but we are particularly interested in original research manuscripts and/or reviews regarding the recent advancements in the production, processing, distribution, preparation and consumption of food, as well as the outputs of these activities, including socioeconomic and environmental outcomes.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
