

Special Issue

The Impact of Urban Environments on Healthy Living

Message from the Guest Editor

This Special Issue will include articles on the impact of urban environments on healthy living. Sustainable urban development aims to improve people's quality of life while preserving the elements of the natural environment for future generations. It involves the use of modern technologies and innovative solutions in smart cities to support the process of creating smart cities. Additionally, methods, techniques, and tools to combat the negative health effects of urbanization are one of the goals of sustainable development. Another important element is meeting the social needs of all age groups; the anthropogenic needs of children, adolescents, adults, and seniors are different and require different solutions. For this Special Issue, we invite articles on these topics, especially those that combine a high scientific level with a practical emphasis on providing optimal solutions in the field of sustainable spatial development.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
