Achieving HIV Management Through Nursing and Public Health Interventions

Message from the Guest Editor

The global response to HIV has achieved remarkable progress, transforming the infection into a manageable chronic condition. Despite these advances, significant public health challenges persist, including disparities in care access, treatment adherence, comorbid disease management, and the persistence of stigma. Nursing and public health professionals are at the forefront of addressing these challenges. Their integrated roles, from direct patient care and counselling to community-level education and policy development, are fundamental to designing effective, equitable, and sustainable interventions that can close the gaps in the HIV care continuum and meet global eradication targets.

This Special Issue will showcase evidence-based interventions that leverage the unique strengths of nursing and public health to overcome barriers in HIV management and promote health equity.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
