

Special Issue

2nd Edition: Diabetes in Sports and Exercise Medicine

Message from the Guest Editor

Thank you for your great support of our last Special Issue on “Diabetes in Sports and Exercise Medicine” (https://www.mdpi.com/journal/ijerph/special_issues/Diabetes_Sport_Medicine). Considering its importance, the journal requested the organization of a second edition of this topic. In this Special Issue, we aim to maintain the focus on exercise and physical activity in diabetes, and welcome papers covering a broad overview of exercise-related topics. These range from short-term effects of exercise to using daily activity measurements as vital signs in diabetes care centers, the health and fitness benefits of resistance and aerobic exercise training, exercise prescription as a form of complementary medicine, as well as the challenges faced by children and/or adults regarding exercise programming at the community level. Our goal is to cover a broad range of diabetes research, including all forms of diabetes mellitus across all life spans.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
