

Special Issue

Sports-Related Injuries in Children and Adolescents

Message from the Guest Editor

Participation in sports is an integral aspect of the life of every child and adolescent. Research and practice in the field of pediatric sports medicine have revealed that, compared with adults, the implications of sports participation and physical activity are vastly different and often physiologically, psychologically, developmentally and socially unique for children and adolescents. In this Special Issue of IJERPH, we invite you to consider sport-related injuries in children and adolescents; these include such considerations as the unique aspects of growth and development related to musculoskeletal injuries, epidemiology, predisposing and risk factors for injuries, the role of training and conditioning, the role of genetics, and the developmental and psychological aspects of sport-related injuries.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
