

## Special Issue

# Aerosol Generations in Working Environments

### Message from the Guest Editor

Aerosol particles are generated at various working environments. It has been reported that nanoparticles, submicron particles, and micron particles are generated in airborne phase within working environments. These aerosol particles are important to environmental research and public health issues due to their hazardous health effects on workers, including respiratory and skin disease problems. In this Special Issue, new discoveries on aerosol generations due to working activities at various working environments will be discussed. Specific working activities will be analyzed for relations with aerosol particles. In addition, new methods for reducing aerosol concentrations will be discussed at working environments.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
