

Special Issue

Work and Occupational Health: Focus on Gender, Youth and New Labor Inequalities

Message from the Guest Editors

The International Labor Organization recognizes that the current labor context generates structural inequalities that disproportionately impact those of a marginalized ethnicity, sexual orientation, gender identity, disability, etc. The structural nature of this inequality affects well-being, mental and physical health, and quality of life.

These effects are not only observable in individuals, but also in terms of relational and social well-being, coexistence, or social exclusion of the general population. This Special Issue aims to attract multidisciplinary researchers analyzing the causes and effects of these inequalities. Potential topics include (but are not limited to): New conditions of labor precariousness and their impact on health.

Gender labor gap.

Gig Economy.

Youth, careers, and well-being.

Ageism and technological competence discrimination.

Structural labor discrimination.

Promotion of occupational mental health.

Suicide and working conditions.

Care economy.

LGBTIQ+ labor discrimination.

New forms of labor relations and their impact on well-being: 4-day working weeks, teleworking, and working on platforms.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
