

Special Issue

Developing Interventions to Address Health Disparities

Message from the Guest Editors

In this Special Issue of IJERPH, we invite papers that contribute to the knowledge base on conceptualization, development, implementation, and evaluation of interventions that address health disparities. We are particularly interested in recent action-oriented research that focuses on programs and interventions addressing health disparities related to COVID-19 and mobilization efforts around racial injustice. Papers can also focus on programming related to any social determinant of health (including but not limited to income, gender, race and ethnicity, access to healthcare, housing, social support, employment, education, early childhood experiences, food security). We are also interested in research supporting efforts to address the structural determinants of health, such as building political will for action on SDOH, integrated governance approaches such as health in all policies, and system integration.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
