

Special Issue

Feature Papers "Age-Friendly Cities & Communities: State of the Art and Future Perspectives"

Message from the Guest Editors

The number of older adults is increasing rapidly, and this demographic shift places an increased level of strain and tension on the various international healthcare and welfare systems. The vast majority of older adults wish to age in place, and many make use of long-term care services, including homecare, rehabilitation services, and social support, as well as home modifications and technology. The primary focus of this Special Issue is to critically assess the state of the art in Age-Friendly Cities and Communities programme. Focusing on how much the programme has impacted on cities, while embracing its foundations, and what are the benefits of consortium member cities? Which gaps can be identified in the model and how should these gaps be addressed? Evaluations of local initiatives are needed in order to move the Age-Friendly Cities and Communities initiative and debate forward. Contributions from top scholars from OECD countries and early career researchers are welcomed whose work intersects across these areas of interest. All submissions should be original, and of high quality.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
