

Special Issue

AgriFood 4.0: Economics, Finance and Engineering for Sustainable Futures

Message from the Guest Editors

In the AgriFood field of research, economics, finance, and engineering have historically been developed as distinct, non-overlapping sciences. However, it is increasingly clear that sustainable agriculture and food production cannot be achieved without a simultaneous focus on the above-cited disciplines. Agricultural sustainability is essential for the continued viability of communities and territories. For this reason, the societal challenge consists of finding a balance between the economic, financial, and managerial practices and environmental and social needs. This Special Issue seeks to demonstrate the important role that interdisciplinary approaches can play towards a sustainable future. It is intended to propose strategies and methods for approaching sustainable goals and thus enhance our ability to develop the AgriFood 4.0 era.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
