

Special Issue

Advances in Occupational and Environmental Research in Agricultural Health

Message from the Guest Editors

Food insecurity and global markets for food commodities have resulted in the widespread use of chemical fertilizers and pesticides, which in turn impact ecosystems, water supplies, and community health. Agricultural workers and their families are on the front lines of exposures to these chemicals, as well as the ergonomic and safety risks present in agricultural operations. For this Special Issue, we invite the submission of papers addressing risks and solutions in agricultural health, especially those combining a high academic standard with a practical focus on providing solutions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
