

Special Issue

Applied Health Econometrics

Message from the Guest Editors

Econometric analysis is a constantly expanding area of knowledge that is providing researchers with better tools to analyze different economic problems. These advances have occurred regardless of the type of data used. They can be found in timeseries analysis, where unit root tests and cointegration analysis play an essential role, as well as in the case of using cross-sectional data—the increasing use of spatial econometric techniques is a good example. Finally, the creation of new databases has led to a great growth in the use of panel data techniques. The objective of this Special Issue is to collect applications that use recent advances in econometrics, all applied to the field of health economics. The Editors encourage presentations that address new econometric techniques to analyze and predict the evolution of different aspects of health economics.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
