

Special Issue

Novel Approaches to Suicide Prevention

Message from the Guest Editors

Suicide is one of the leading causes of preventable death worldwide and the leading cause of death in some sectors of the population. Suicide attempt and suicidal ideation are more common than suicide. Although many countries have developed suicide prevention strategies, rates of suicide, suicide attempt, and suicidal ideation are increasing in many parts of the world. This suggests that new approaches to suicide prevention are needed.

This Special Issue will have a focus on innovative approaches to the prevention of suicide, suicide attempt, and suicidal ideation. Submissions that focus on novel interventions, innovative methodologies, and program or policy evaluation are particularly encouraged. All study designs are welcome, including quantitative and qualitative studies, mixed methods, and systematic reviews and meta-analyses. Some keywords are listed below which may help guide submissions.

- suicide prevention
- interventions to prevent suicide, suicide attempt, and/or suicidal ideation
- treatment interventions
- health service reform
- innovative methodological approaches
- program or policy evaluation
- novel interventions for vulnerable groups

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
