Association between Inflammation and Autoimmune Diseases

Message from the Guest Editors

Autoimmune diseases (ADs) are chronic pathologies triggered by the loss of immunological tolerance to self-antigens, often causing systemic or organ-specific damage. Genetic and environmental factors are highly involved in the pathogenesis of ADs. Various infections may influence one or more kinds of these diseases, and a single organism may be able to trigger more than one AD. In this Special Issue, we will address viral and bacterial infections and their pathogenic and virulent mechanisms in autoimmunity.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
