Special Issue

Attachment across the Lifespan: Challenges in the New Century

Message from the Guest Editor

Attachment theory has become a fundamental tool to understand some major features of human psychic and relational functioning. This is well-evidenced by the fact that none of what is indispensable to human global development has been kept out from its research scope. This feature is sustained by its already-proven ability to address the norm and the pathos, the individual and the relational, from a behavioral and representational level to a neurobiological one, and all this across the lifespan. Nevertheless, its welldeveloped body of knowledge does not hinder its dynamic quality, i.e., its readiness to respond to life's ever-changing challenges, one of the best ways to test the relevance of a theory. In this Special Issue of the International Journal of Environmental Research and Public Health (IJERPH) we shall set ourselves to the task of substantiating this claim. The details please see the website:

https://www.mdpi.com/journal/ijerph/special_issues/Att achment_Health. New research papers and comprehensive reviews targeting challenges in the new century on attachment across the lifespan are welcome to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
