

Special Issue

Relationship between Nutrition and Child Health

Message from the Guest Editor

Healthy dietary habits play an important role in our states of mental and physical health and the prevention and treatment of non-communicable diseases, in both children and adolescents, as well as the elderly. In this Special Issue of *Nutrients*, we invite contributions dealing with various aspects of nutrition and dietary patterns in relation to the healthy development of children and adolescents or quality of life, including—but not limited to—papers on nutrition knowledge and nutrition in diseases of civilization, the influence of diet on the development of excess body weight, and analyses of dietary patterns in different age groups compared to population recommendations. We welcome original research articles (clinical, translational, or basic research), as well as meta-analyses and reviews.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
