Associations between Mental Health and Intrapersonal, Interpersonal and Cultural Factors

Message from the Guest Editor

Mental health depends on interpersonal relations and intrapersonal factors, as well as environmental events and socio-cultural factors, which are interrelated with biological factors. They affect mental health, as well as mental health problems may affect them, without forgetting that the capacity to establish constructive relationships is a key point of mental health itself. The social, cultural, economic, technological, environmental and demographic changes impact interpersonal relationships, intrapersonal factors, and mental health. This Special Issue aims to face the role of interpersonal relationships, and intrapersonal and socio-cultural factors, on mental health, throughout the life span, within the biopsychosocial model of mental health/disorders. It primarily wants to deal with the topic from a psychological perspective (e.g., developmental, dynamic, clinical, social, cultural, cross-cultural), but not limited to it. Contributions from other disciplines (e.g., psychiatry, sociology, psychoanalysis, neuroscience) or inter/multidisciplinary contributions are well-accepted. Original research articles, reviews, and case reports are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
