

Special Issue

Health Risks of Exposure to Polluted Air in Workplaces

Message from the Guest Editor

Globally, people spend a significant amount of their time in various occupational and industrial settings. Workplace exposures, especially air pollution, considerably challenge employees' health and well-being. This Special Issue aims to bring together interdisciplinary research on the health hazards of air pollution in workplaces. We invite researchers, academics, and professionals from environmental science, public health, occupational health and safety, epidemiology, and related disciplines to contribute their original research to this Special Issue. Submissions to this Special Issue are open to subject areas including, but not limited to: assessment of respiratory, cardiovascular, and other health effects of air pollution in workplace settings; quantification of air pollutants in different workplace environments; innovative approaches and interventions to minimize employee exposure to air pollutants; and the effects of occupational health policies and regulations on improving workplace air quality.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
