

Special Issue

Bacterial Zoonoses

Message from the Guest Editor

Zoonoses present a significant threat to public health worldwide. Bacterial zoonoses can be transmitted to humans through close contact with infected animals such as livestock, pets, fish, and wildlife. Many aspects such as global climate changes, closer interactions with animals, and antimicrobials overuse contribute to emerging or re-emerging bacterial zoonoses. These continuously developing factors increase the importance and spread of bacterial zoonoses. For this Special Issue, original research articles and reviews addressing topics of epidemiology, molecular biology, vaccine development research, pathogenesis, immune responses, antimicrobial resistance, and treatment of bacterial zoonoses are welcome, especially those combining a high academic standard coupled with a practical focus on controlling bacterial zoonoses.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
