

Special Issue

Psychometric and Biometric Tools in Human Health and Disease

Message from the Guest Editors

We welcome contributions focusing on psychometric tools associated with the different neuroscientific levels of investigation (e.g. genetic/epigenetic, neural, behavioral, psychophysiological) in health and disease.

Potential contributions may:

1. Investigate and discuss the relationships between psychometric scores and neurobiological data in clinical or non-clinical samples;
2. Validate and discuss, in clinical or non-clinical populations, new biologically-informed psychometric tools that are strongly rooted in a neuroscientific background.

We invite you to contribute to this Special Issue with a research paper, systematic review, meta-analysis, methodological paper, brief report, mini-review, or editorial addressing one or more of these topics.

Keyword: psychometric tools; biometrics; assessment; neurobiology; biostatistics; emotion; cognition

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
