# Evidence-Based Nursing in Primary Care: Enhancing Quality and Outcomes

### Message from the Guest Editors

Evidence-Based Nursing (EBN) in primary care is a fundamental approach to improving service quality and clinical outcomes. It relies on the integration of the best available scientific evidence, clinical expertise, and patient needs, ensuring safe and effective interventions. In primary care, EBN plays a crucial role in early diagnosis, chronic disease management, and health promotion. By implementing evidence-based practices, nurses can enhance patient adherence to treatment protocols, reduce hospitalizations, and improve overall quality of life. With this, strengthening EBN in primary care leads to safer, more efficient, and patient-centered healthcare, ultimately delivering better outcomes for both patients and the healthcare system.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
