Mental Health Across the Breast Cancer Survivorship Continuum: Risk Factors and Outcomes in Diverse and Understudied Populations

Message from the Guest Editor

We are interested in observational research studies or systematic reviews. Studies of particular interest include those examining (1) risk and protective factors for adverse mental health outcomes after diagnosis or (2) the impact of mental health on long-term prognostic and non-prognostic outcomes important in cancer survivorship. Also of interest are intervention studies with mental health as an outcome. We are particularly interested in studies that include rural populations, racial and ethnic minorities, individuals of lower socioeconomic status, and sexual and gender minority populations to address current gaps in the literature.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
