Community-Engaged Research to Promote Environmental Health, Sustainability, and Community Resiliency

Message from the Guest Editors

The built and social environments can have both salutogenic and pathogenic features that can influence health at the individual, population, and community levels. Issues such as urban sprawl, substandard housing, transportation inequities, lack of access to environmental amenities, as well as limited pedestrian friendly infrastructure, can lead to environmental injustice, negative health behaviors, and health inequities. Community-engaged research has become very important in helping to study and address these problems. Through community-engaged research including community-based participatory research (CBPR), participatory action research (PAR), community citizen science, community-owned and managed research (COMR), community-university partnerships, etc., community-based organizations utilize their grassroots activism and resources, contextual expertise, and research partners to translate research to action to make their communities more sustainable, healthier, and resilient.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

Centre for Public Health, Equity and Human Flourishing, Torrens
University Australia, Adelaide 5000, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
