

Special Issue

Climate Change Adaption for Public Health

Message from the Guest Editor

In this Special Issue, we would like to share the best public health adaptation strategies and technologies to minimize climate change impacts to public health. We highly encourage innovative ideas and insightful observations, such as policy analyses to identify current needs and gaps on climate change action plans, reviews of existing technologies that can be effectively converted to climate-resilient technologies, and introduction of new technologies in disaster preparedness, and in water, sanitation, and hygiene (WASH), with particular interest in rainwater harvesting, ground water treatments, and dry toilets with flood-proofness.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
