

Special Issue

Contaminants of Emerging Concern (CECs): Occurrence and Fate in Aquatic Ecosystems

Message from the Guest Editors

Environmental monitoring is critical to the protection of human health and the environment. As the human population continues to increase, as industrial development, energy and land use continue to expand, and despite advances in pollution control, the continued production of pollution remains inevitable. Thus, the need for environmental monitoring is still as great as ever. The current body of evidence on the nature and spread of CECs is thin, and further data are needed. Therefore, this Special Issue aims to focus on the occurrence and fate of CECs in the aquatic environment.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
