Community Mental Health

Message from the Guest Editor

Community mental health has historically been associated with the deinstitutionalization of mental health treatment and recovery of people with severe and persistent mental illness, which has taken place to a lesser or greater extent internationally over the last ~60 years. This process has been based on the notion of community integration, which continues to be a challenge for mental health systems, particularly as services face inadequate resourcing, operate within outdated legal and regulatory frameworks, and the experience overreliance on the biomedical model (WHO, 2021). To that end, care typically neglects the full range of social determinants that impact people's mental health and is not successful in achieving community integration, resulting in inadequate care and hindering the recovery process. This Special Issue of the International Journal of Environmental Research and Public Health (IJERPH) focuses on the current and emergent state of knowledge of the community mental health ecosystem. New research papers, reviews, case reports, and conference papers are welcome in this issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
