

Special Issue

Risk Assessment for COVID-19

Message from the Guest Editor

The great coronavirus disease 2019 (COVID-19) pandemic has overwhelmed the world in 2020–2021 and will continue to have residual effects. Better understanding the public health, medical, psychological, social, and infrastructure aspects of this pandemic will help to plan for future crises and risk prevention. For this Special Issue, we seek thoughtful and well-written manuscripts that address COVID-19 from historic, current, and future perspectives, emphasizing its local and global implications. Systematic overviews, meta-analysis, retrospective and prospective risk assessments, as well as articles on both quantitative and qualitative models from diverse fields including epidemiology, public health, medicine, genetics, systems biology, informatics, data science, engineering, sociology, anthropology, nursing, environmental studies, statistics, and psychology are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
