

Special Issue

Air Pollution, Air Quality Management, and Environmental Sustainability

Message from the Guest Editors

This Special Issue aims to advance knowledge and its application at the intersection of air pollution and public health and includes consideration of solutions focused on air quality management and advancing environmental sustainability. We invite original research, reviews, and short reports on innovative air pollution management and monitoring approaches and technologies, exposure assessment techniques, ecological risk factors, and health outcomes associated with poor air quality. This Issue seeks to highlight interdisciplinary approaches that protect both human health and the ecological environment, ultimately advancing sustainable solutions. Contributions that explore strategies to reduce air pollution and promote effective air quality management and that examine policies seeking to promote sustainable urban and natural environments are especially encouraged. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
