COVID-19 Pandemic Impact on Human Health: State of the Art and Perspectives for a Post Pandemic Period

Message from the Guest Editors

The COVID-19 pandemic has had a major impact on human health. These effects range from immediate mortality to the long-term consequences of so-called long COVID. The worldwide impact of COVID-19 on human health undoubtedly underscores the need for public health strategies, especially in the post-pandemic period which appears to be emerging in 2022. The aim of this Special Issue is to collect papers that concern epidemiological studies on the impact of the COVID-19 pandemic on human health, as well as potential and targeted papers that address public health strategies to cope with future events and strengthen preparedness at all levels.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
