

## Special Issue

# Second Edition: Oral Health and Care in Children

### Message from the Guest Editors

Although dental care technology has generally improved in recent decades, oral diseases still affect a considerable number of children worldwide.

Malocclusion caused by abnormal habits, aberrant soft tissue, and premature contact should be identified and corrected early. These oral diseases and conditions, if they remain untreated, can cause deleterious effects on children. To address oral health problems in children, dentists, dental researchers, and dental public health sectors should understand the oral health situations of children, assess their oral healthcare needs, and develop effective oral healthcare strategies.

This Special Issue welcomes original research, reviews, and case reports (with good-quality photos) related to oral health and care in children, which can include, but are not limited to, oral health promotion, the assessment or management of oral health diseases as well as conditions of children, oral healthcare strategies and programmes for children, and novel oral healthcare protocols for children. Oral healthcare strategies can be considered at both the individual and community levels.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
