Special Issue

Advanced Research on Cancer Therapy and Public Health

Message from the Guest Editors

Cancer is growing as a major public health concern worldwide as the population ages. Because cancer is a disease with various risk factors and outcomes, coordinated public health approaches involving risk reduction, early detection, and post-diagnosis care, such as therapies, are necessary to address cancer.

Determining innovative ways to promote people to change their behaviors and choose a healthy lifestyle will have dramatic impacts. Public health interventions should be developed to reduce the risk of developing cancer. Treatment modalities for cancer include radiation therapy, surgery, chemotherapy, immunotherapy, and hormonal therapy. Although therapies against various types of cancers are developing faster than in the previous decades, they might be premature and require more knowledge of personal and public health strategies.

This Special Issue aims to collect contributions on the recent trends and advances in the public health field regarding cancer prevention and management. We particularly encourage the submission of interdisciplinary and multi-national collaborative research. We solicit contributions on all topics related to this research area.

Guest Editors

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation, Richard N. Dixon Research Center, Morgan State University, Baltimore, MD 21251, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
