

Special Issue

Child Maltreatment and Well-Being

Message from the Guest Editors

Globally, at least one billion children experienced violence in the past 12 months (Hillis et al. 2016). The risk and protective factors, impact, and identification of as well as intervention in child maltreatment have been subject to extensive study. However, the research is quite fragmented and has yet to attain an integrated and theoretically articulated framework, resulting in very little success in the prevention of child maltreatment. In this Special Issue, we hope to publish high-level articles on child maltreatment: prevention, risks, identification, intervention, conceptual issues, etc., in order to build the empirically driven framework of the research area further. We hope to present analysis based on novel research designs and advanced research methods in producing new information on child maltreatment. New research papers, reviews, case reports, methodological papers, and brief reports are welcome to this Issue. We hope to receive manuscripts from different disciplines, aiming to gain a deeper understanding of the complex issue of child maltreatment, and to promote its prevention.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
